

ANURAG PANNU

Data Analyst

Bangalore, Karnataka, India | anuragpannu1126a@gmail.com | LinkedIn | GitHub | Portfolio | 9988007155

SUMMARY

Data Analyst with 1.5+ years of experience in Power BI, Python, SQL, and Microsoft Fabric. Specialized in dashboard development, semantic model migration, and BI automation. Proven ability to migrate enterprise-scale data pipelines, build AI-powered reporting solutions, and deliver actionable insights to stakeholders.

SKILLS

BI & Visualization: Power BI, DAX, Power Query, Semantic Models, Row-Level Security, Microsoft Fabric, Excel, Pivot Tables, Slicers

Programming & Analysis: Python, Pandas, NumPy, Matplotlib, Seaborn, SQL, Joins, CTEs, Window Functions, Subqueries

Data Platforms: Microsoft Fabric Lakehouse, Databricks, SQL Server

AI & Automation: Azure AI, Generative AI, Agentic AI, LLM Integration, Power Automate

Tools: Git, GitHub, Jupyter Notebooks, Microsoft 365

EXPERIENCE

Wipro — Developer L2, Data Analytics & AI

Nov 2024 – Present

Power BI Lakehouse Migration

- Led migration of Power BI semantic models from Databricks to Microsoft Fabric Lakehouse, ensuring zero downtime for 50+ downstream dashboards and reports.
- Automated DAX measure extraction and recreation using SAMPATHI (Python), reducing migration time per app by ~60%.
- Built Python notebooks for batch migration, enabling one-click repointing of data sources across multiple environments.
- Designed a validation framework to compare pre- and post-migration measure outputs, catching data discrepancies before production rollout.

Fabric Workload — AI-Powered Dashboard Generator

- Built a custom Microsoft Fabric workload that auto-generates Power BI dashboards from CSV data, prompts, and PDFs, reducing dashboard creation time from days to minutes.
- Integrated Azure-hosted LLM into the backend to interpret business requirements and programmatically generate visualizations and KPIs.
- Architected the end-to-end data flow: frontend upload interface, backend LLM pipeline, and Power BI report generation, all running natively inside Fabric.

Supplier PO Confirmation Automation

- Designed a 3-agent AI system in Python to automate Supplier PO confirmation workflows, reducing manual exception processing from ERP data.

Infowiz Software Solutions — Data Analytics Intern

Jan 2025 – Apr 2025

- Cleaned and preprocessed datasets using Python (Pandas), resolving data quality issues across missing values, duplicates, and inconsistent formatting.
- Built visualizations and summary reports to communicate business trends to stakeholders, supporting data-driven decision-making.
- Developed predictive models for business forecasting using regression and classification techniques.

PROJECTS

PhonePe Transaction Analytics Dashboard — Power BI

- Built a Power BI dashboard analyzing user and transaction data across payment services to surface revenue trends and user behavior patterns.
- Created a custom Date Table using DAX, established data model relationships, and developed KPIs: Total Transactions, Success Rate, and MoM growth.
- Designed interactive visualizations with custom tooltip pages for drill-down insights by service type, user segment, and time period.

Blinkit Sales Dashboard — Excel

- Built an interactive sales dashboard in Excel analyzing grocery sales data with KPIs: Total Sales, Average Sales, and Average Ratings.
- Performed data cleaning, standardization, and Pivot Table analysis. Designed donut, bar, and funnel charts with connected slicers for dynamic cross-filtering across outlet location, item type, and product category.

EDUCATION

B.E. Computer Engineering — Thapar University (2022 – 2025)

Diploma in Engineering — ISTC-CSIO (2019 – 2022)

CERTIFICATIONS

- Microsoft PL-300 — Power BI Data Analyst — Microsoft (2026)
- Google Data Analytics Professional Certificate — Coursera (2025)
- AI Engineer Core Track — Udemy (2026)
- Python Programming Masterclass — Udemy (2025)

AWARDS

- Awarded Impact Player at the Wipro x Microsoft Copilot AI Champions League, 2026.
